EDUCATION

Vishnu Institute of Technology

Bachelor of Technology in Computer Science

Dec 2021 - Apr 2024

Bhimavaram, India

- CGPA: 9.1/10 Coursework: Data Structures, Algorithms, DBMS, Operating Systems, OOPs.

EXPERIENCE

Associate Software Engineer

Accenture

Aug 2024 - Present

Hyderabad, India

- Database Optimization (High-Volume): Engineered complex PL/SQL stored procedures and triggers to handle critical transactional workflows. Optimized legacy queries involving multi-table JOINS, reducing data retrieval latency by ~40% for large-scale datasets.
- Security & Access Control: Developed scalable frontend modules using ExtJS (JavaScript), implementing Role-Based Access Control (RBAC) and dynamic field validations to ensure strict data security compliance.
- System Refactoring: Refactored monolithic legacy code into modular components, improving code maintainability and reducing technical debt by 30%.
- Release Management: Streamlined the tenant-to-tenant code migration process, ensuring zero data loss and reducing deployment turnaround time by 25% across 3 PI Planning cycles.

PROJECTS

Real-Time Distributed Multiplayer Engine

June 2023 - Feb 2024

- Tech Stack: C#, Unity, Photon Networking, OAuth 2.0
- Architecture: Architected a latency-sensitive distributed system supporting concurrent user sessions using Photon Networking. Implemented a Pub/Sub model to broadcast state changes (position, health, stats) across connected clients with sub-50ms synchronization.
- Identity & Consistency: Integrated Google OAuth 2.0 for secure authentication and designed a consistency check algorithm to enforce unique namespaces for user identity, preventing collision in distributed leaderboards.
- State Synchronization: Engineered a centralized state manager (Room Host) with Role-Based Access Control (RBAC), allowing privileged users (Admins) to execute atomic team-balancing operations via RPCs (Remote Procedure Calls).
- Network Optimization: Implemented Dead Reckoning and Client-Side Prediction algorithms to compensate for network latency (lag), ensuring smooth object interpolation and physics synchronization over high-jitter networks.

TECHNICAL SKILLS

Programming Languages: Java, C++, SQL, C, Python.

Technologies & Tools: MERN Stack, REST APIs, Firebase, Unity, Photon, AI/NPC Systems

Data & Caching: MySQL, MongoDB, Redis, Apache Kafka.

ACHIEVEMENTS

- LeetCode (Top 5%): Solved 400+ Problems globally, specializing in Dynamic Programming & Graph Algorithms.
- Accenture Star Performer: Recognized as a top talent within 5 months for rapid delivery of critical enterprise modules.
- Hackathon Lead (IGDC Partner): Organized a Pan-India Game Development Hackathon (REIMAGINE) and coordinated logistics for student developers nationwide.
- Smart India Hackathon Finalist: Selected for the Grand Finale (2022) for engineering a scalable logistics solution.
